line through aggressive acquisitions. Since 1995, the "New Goliath," as Cisco is known throughout the business and finance communities, has acquired more than sixty companies. In this groundbreaking book, a Silicon Valley veteran, Ed Paulson, uses his strong connections to Cisco's management to reveal the M&A gospel according to Cisco. Paulson explores how Cisco has used acquisitions to stay ahead of its competitors, analyzes their strategies and proven methods for incorporating new companies seamlessly, positively, and profitably. Paulson reveals the centerpiece of Cisco's acquisition strategy-one that is company-focused, culturally compatible, and retains staff. He examines how Cisco executives determine if a target company is compatible with Cisco's corporate culture and strategic outlook and

describes the extraordinary lengths to which these executives will go to gain the loyalty of acquired people. This book details the Cisco methodology and illustrates how it can be applied to companies across industries. Ed Paulson (Chicago, IL) is President of Technology and Communications, Inc., a business and technology consulting firm and a visiting professor at DePaul University's School for New Training. He is a Silicon Valley veteran with more than two decades of experience and the author of numerous business and technology books, most recently, *The Technology M&A Guidebook* (Wiley: 0-471-36010-4).

Adam Segal presents a startling new viewpoint to the debates about the technological and economic rise of Asia - and what

it means for the U.S.'s economic leadership and interests. Drawing from vital statistics and intriguing case studies, Segal persuasively argues that by examining what drives innovation and what constrains it, we can see what advantages the U.S. has to leverage. His case rests on what he calls a gap between Asian 'hardware,' their increased investment in communications, education, basic research, and infrastructure, coupled with low-cost labor, and American 'software,' that complex web of institutions, relationships, and understandings that moves ideas from the lab to the market. The U.S. alone can count on developed software of innovation; India, China, Japan, and South Korea all suffer from underdeveloped private sectors and lack the underlying cultural framework that fosters great cooperation between

academic, industry, and government. An example of the disconnect present in Asia's system of innovation is Chen Jen, dean at the School of Microelectronics in Shanghai, whose work on China's first digital signaling processing computer chip made him a national star before it was revealed that the chip was a fake. Advantage presents a realistic view of the emerging world of globalized innovation, fully explicating the extent to which the globalization of science and technology is a social and political process. Relying on extensive and up-to-the-minute economic and political data, Advantage upends conventional thinking on the decline of the U.S. and the rise of Asia in powerful, concise prose.
