For the portfolio with two risky assets, the expected return and standard deviation of Portfolio p are = $8w_D + 13w_E$ $\sigma_p = [w_D\sigma_D + w_E\sigma_E + 2w_Dw_ECov(r_D, r_E)]^{1/2} = [144w_D + 400w_E + (2 \times 72w_Dw_E)]^{1/2}$. CHAPTER 8 Optimal Risky Portfolios 221

Two-asset portfolio Consider two risky assets with known means R_1 and R_2 , variances σ_1^2 and σ_2^2 , of the expected rates of returns R_1 and R_2 , together with the correlation coefficient ρ_{12} . Let w_1 and w_2 be the weights of assets 1 and 2 in this two-asset portfolio. Portfolio mean: $RP = (1 - w_2)R_1 + w_2R_2$ Portfolio variance: $\sigma_p^2 = (1 - w_2)^2\sigma_1^2 + w_2^2\sigma_2^2 + 2w_1w_2\rho_{12}\sigma_1\sigma_2$

Chapter 7 Portfolio Theory 7-3 2.1 Portfolio of Two Assets A portfolio of these two assets is characterized by the value invested in each asset. Let V_1 and V_2 be the dollar amount invested in asset 1 and 2, respectively. The total value of the portfolio is $V = V_1 + V_2$. Consider a portfolio in which $w_1 = V_1/V$ is the weight on asset 1

Chapter 7 Portfolio Theory

Modern portfolio theory (MPT), or mean-variance analysis, is a mathematical framework for assembling a portfolio of assets such that the expected return is maximized for a given level of risk. It is a formalization and extension of diversification in investing, the idea that owning different kinds of financial assets is less risky than owning only one type.

The investment opportunity set is the set of portfolio expected return, and portfolio standard deviation, values for all possible portfolios whose weights sum to one. As in the two risky asset case, this set can be described in a graph with on the vertical axis and on the horizontal axis.

An investor who wishes to form a portfolio that lies to the right of the optimal risky portfolio on the Capital Allocation Line must: A. lend some of her money at the risk-free rate and invest the remainder in the optimal risky portfolio. B. borrow some money at the risk-free rate and invest in the optimal risky portfolio.
