Neural Networks, EANN 2016, held in Aberdeen, UK, in September 2016. The 22 revised full papers and three short papers presented together with two tutorials were carefully reviewed and selected from 41 submissions. The papers are organized in topical sections on active learning and dynamic environments; semi-supervised modeling; classification applications; clustering applications; cyber-physical systems and cloud applications; time-series prediction; learning-algorithms.

This book gathers a selection of refereed papers presented at the "International

Conference on Operations Research OR2015," which was held at the University of Vienna, Austria, September 1-4, 2015. Over 900 scientists and students from 50 countries attended this conference and presented more than 600 papers in parallel topic streams as well as special award sessions. Though the guiding theme of the conference was "Optimal Decision and Big Data," this volume also includes papers addressing practically all aspects of modern Operations Research.

This book collects, for the first time in one volume, contributions honoring Professor

Raymond Smullyan's work on self-reference. It serves not only as a tribute to one of the great thinkers in logic, but also as a celebration of self-reference in general, to be enjoyed by all lovers of this field.

Raymond Smullyan, mathematician, philosopher, musician and inventor of logic puzzles, made a lasting impact on the study of mathematical logic; accordingly, this book spans the many personalities through which Professor Smullyan operated, offering extensions and re-evaluations of his academic work on self-reference, applying self-referential logic to art and nature, and lastly, offering new

puzzles designed to communicate otherwise esoteric concepts in mathematical logic, in the manner for which Professor Smullyan was so well known. This book is suitable for students, scholars and logicians who are interested in learning more about Raymond Smullyan's work and life.

This second volume of the two-volume book contains selected papers from the conference 'Groups St Andrews 2001 in Oxford'. The articles are contributed by a number of

leading researchers and cover a wide spectrum of modern group theory. There are articles based on lecture courses given by five main speakers together with refereed survey and research articles. The 'Groups St Andrews' proceedings volumes are a snapshot of the state of the art in group theory and they often play an important role in future developments in the subject.

Freud's Papers on Technique is usually treated as an assemblage of papers featuring a few dated rules of conduct that are either useful in some way, or merely customary, or

bullying, arbitrary and presumptuous.

Lawrence Friedman reveals Papers on Technique to be nothing of the sort. Freud's book, he argues, is nothing less than a single, consecutive, real-time, log of Freud's painful discovery of a unique mind-set that can be produced in patients by a certain stance of the analyst. What people refer to as "the rules", such as anonymity, neutrality and abstinence, are the lessons Freud learned from painful experience when he tried to reproduce the new, free mind-set. Friedman argues that one can see Freud making this empirical discovery gradually over the

sequence of papers. He argues that we cannot understand the famous images, such the analyst-as-surgeon, or mirror, without seeing how they figure in this series of experiments. Many of the arguments in the profession turn out to be unnecessary once this is grasped. Freud's book is not a book of rules but a description of what happens if one does one thing or another; the choice is the therapist's, as is the choice to use them together to elicit the analytic experience. In the light of this understanding, Friedman discusses aspects of treatments that are guided by these principles, such as

enactment, the frame, what lies beyond interpretation, the kind of tensions that are set up between analyst and patient, the question of special analytic love, the future of analytic technique, and a possible basis for defining Freudian psychoanalysis.

Finally, he makes concrete suggestions for teaching the Papers on Technique. Freud's Papers on Technique and Contemporary Clinical Practice will appeal to all psychoanalysts and psychoanalytic psychotherapists concerned about the empirical basis of their customary procedures and the future of their craft.

The performance of a computer is a complicated issue and a function of many interrelated quantities. These quantities include: the application, the language, the implementation, the compiler, the architecture, and the hardware characteristics. The usual method to evaluate the performance is to compose a benchmark of programs. This book presents a useful overview on benchmarking. Over twenty experts contributed papers on five important topics concerning benchmarking advanced scientific computer systems: taxonomy and performance metrics, well-known standard and application
