Were you looking for the book with access to MyStatLab? This product is the book alone, and does NOT come with access to MyStatLab. Buy the book and access card package to save money on this resource. In *Statistics for Business: Decision Making and Analysis*, authors Robert Stine and Dean Foster of the University of Pennsylvania's Wharton School, take a sophisticated approach to teaching statistics in the context of making good business decisions. The authors show students how to recognize and understand each business question, use statistical tools to do the analysis, and how to communicate their results clearly and concisely. In addition to providing cases and real data to demonstrate real business situations, this text provides resources to support understanding and engagement. A successful problem-solving framework in the 4-M Examples (Motivation, Method, Mechanics, Message) model a clear outline for solving problems, new What Do You Think questions give students an opportunity to stop and check their understanding as they read, and new learning objectives guide students through each chapter and help them to review major goals. Software Hints provide instructions for using the most up-to-date technology packages. The Second Edition also includes expanded coverage and instruction of Excel® 2010 and the XLSTAT(tm) add-in. The MyStatLab(tm) course management system includes increased exercise coverage with the Second Edition, along with 100% of the You Do It exercises and a library of 1,000 Conceptual Questions that require students to apply their statistical understanding to conceptual business scenarios. Business Insight Videos show students how statistical methods are used by real businesses, and new StatTalk Videos present statistical concepts through a series of fun, brief, real-world examples. Technology tutorial videos at the exercise level support software use.

**KEY BENEFIT:** In the competitive world of business, effective decision making is crucial. To help your students stand out from the crowd, Robert Stine and Dean Foster of the Wharton School of the University of Pennsylvania have written an exciting new book for business statistics. This book teaches students how to use data to make informed decisions; every chapter highlights issues in the modern business world. The authors provide strong connections between the statistical concepts in the text and the problems students will face in their future careers, showing students how to find patterns, create statistical models from the data, and deliver their findings to an audience. Suitable for students at the undergraduate, graduate, or MBA level, *Statistics for Business: Decision Making and Analysis* equips students with the most important skill they'll need in the business world—using statistics to make better business decisions. **KEY TOPICS:** VARIATION IN DATA, Introduction, Data, Describing categorical data, Describing numerical data, Association in categorical data, Association in numerical data; PROBABILITY, Probability, Conditional Probability, Random Variables, Association between Random Variables, Probability models for Counts, Normality; INFERENCE, Samples and Surveys, Sampling Variation and Quality, Confidence Intervals, Hypothesis Tests, Alternative Approaches to Inference, Comparison; REGRESSION MODELS, Linear Patterns, Curved Patterns, Simple Regression, Regression Diagnostics, Multiple Regression, Building Regression Models, Categorical Explanatory Variables, Analysis of Variance, Time Series **MARKET:** For all readers interested in business statistics.

Revised edition of the authors' *Statistics for business*, 2013.

**ALERT:** Before you purchase, check with your instructor or review your course syllabus to ensure that you select the correct ISBN. Several versions of Pearson's MyLab & Mastering products exist for each

Preface Statistics is seldom the most eagerly anticipated course of a business student. It typically has the reputation of being a boring, complicated, and confusing mix of mathematical formulas and computers. Our goal in writing this casebook and the companion volume (*Basic Business Statistics*) was to change that impression by showing how statistics gives insights and answers interesting business questions. Rather than dwell on underlying formulas, we show how to use statistics to answer questions. Each case study begins with a business question and concludes with an answer. Formulas appear only as needed to address the questions, and we focus on the insights into the problem provided by the mathematics. The mathematics serves a purpose. The material is organized into 12 "classes" of related case studies that develop a single, key idea of statistics. The analysis of data using statistics is seldom very straightforward, and each analysis has many nuances. Part of the appeal of statistics is this richness, this

## Get Free Statistics For Business Stine

blending of substantive theories and mathematics. For a newcomer, however, this blend is too rich and they are easily overwhelmed and unable to sort out the important ideas from nuances. Although later cases in these notes suggest this complexity, we do not begin that way. Each class has one main idea, something big like standard error. We begin a class by discussing an application chosen to motivate this key concept, and introduce the necessary terminology.

Never HIGHLIGHT a Book Again! Includes all testable terms, concepts, persons, places, and events.
