The beech marten, also known as the stone marten, house marten or white breasted marten, is a species of marten native to much of Europe and Central Asia, though it has established a feral population in North America. It is listed as Least Concern by the IUCN on account of its wide distribution, its large population, and its presence in a number of protected areas. It is superficially similar to the pine marten, but differs from it by its smaller size and habitat preferences. While the pine mart

Beech marten - Wikipedia

When in sympatry with the pine marten (Martes martes), the stone marten is a habitat generalist with synantropic behavior (use of human structures; Delibes 1983; Herrman 1994; Reig 1992). In areas of the Iberian Peninsula without pine martens (Matos and Santos-Reis 2006), stone martens are known to occupy the higher quality forest habitat (Virgós and Garcia 2002 ; Virgós et al. 2000).

Stone marten (Martes foina) habitat in a Mediterranean ...

The stone marten, or beech marten (M. foina), inhabits wooded country in Eurasia. It has grayish brown fur with a divided white throat bib. It weighs 1–2.5 kg (about 2–5.5 pounds), is 42–48 cm (16.5–19 inches) long, and is 12 cm (roughly 5 inches) high at...

Stone marten | mammal | Britannica

The stone marten (Martes foina) is often found in urban habitats across continental Europe, due to its flexible foraging behaviour. We compare the utilisation of food types for martens living in villages in a more populated region with that of martens living in a less populated mountainous forest region, over the summer fruiting season (May–July) of 2013, inferred from the analysis of 310 faecal samples.

Comparing the summer diet of stone martens (Martes foina ...

Stone marten (Martes foina) and pine marten (Martes martes) occur sympatrically over a large area in Central Europe and utilize similar habitats and food, therefore it is expected that their coexistence requires differentiation in at least one of their niche dimensions or the mechanisms through which these dimensions are used. To test this hypothesis, we used differences in the species activity patterns and habitat selection, estimated with a resource selection function (RSF), to predict the ...

Home for a Stone marten can be in a hollow tree, a fissure in a rock face or quarry, a pile of rocks, an underground tunnel or cave and most importantly for humans in a roof space, barn or other building where they often cause concern for the human occupants.

All about the Pine marten and Stone Marten in France

Stone martens often selected habitats located closer to the city centre, whereas red foxes often selected habitats closer to urban borders than expected. The distribution of red foxes and stone martens is influenced by several factors including the availability of shelter and food, as well as the opportunity to move around undetected.

Habitat selection by two predators in an urban area: The ...

Beech marten, Stone marten, Martes foina. Order: Carnivora. Family: Mustelidae. Habitat: River & wetlands, On tree, Forest, Shrubs, Alpine, Prairies & steppes, Farmlands /human landscapes. Light brown coat with a cream chest and throat, longer tail, more elongated and angular head with shorter, more rounded and widely spaced ears.

Martes foina - Mammalnet

Our results showed that stone martens are found both in rural and forested landscapes. Foraging and resting activities occurred far from roads in large and complex patches of cork oak woodlands, riparian vegetation, orchards, and pastureland.
